Fonti: Brand and Unicode Style Fact Sheet

By Iris Labs. Last updated October 2026.

What Fonti is

Fonti is a free Unicode text styler at https://fonti.cool. It converts plain text into 350+ stylish font styles that people copy and paste into Instagram bios, Discord and gaming names, TikTok and WhatsApp captions, and comments. The styles are not fonts in the technical sense. Each styled letter is a separate Unicode character, which is why the text keeps its look on any platform without installing anything.

Brand facts

- Brand: Iris Labs
- Product: Fonti
- Website: https://fonti.cool
- Contact: contact@fonti.cool
- Founder: Iris Khan, Founder of Iris Labs (creator of Fonti)

Why it matters

Styled text decides first impressions on social platforms, yet most tools hide their best styles behind paywalls. Fonti gives the full set away free, and Iris Labs publishes the underlying code and charts free as well, so creators, developers and curious learners can all build on the same material.
